### Cleaning Protocol/Lot # and Chemical Traceability # for Glass Only Containers

Recommended Procedural Steps:

1. Have a 40 ml. VOA vial containing the applicable preservative chemical. With the plunger seated in the handle, push the Terra Core™ sampler into the exposed soil type until the chamber is filled. A filled chamber will deliver approximately 5 or 10 grams, but this is dependent on the density of the soil and the syringe size.
2. The soil plug collected should be flush with the open end of the sampler. Wipe away all solids or debris from the outside of the sampler as quickly as possible. (Remove any excess solids that extended beyond the opening of the chamber).
3. Rotate the plunger that was seated in the handle top 90° until it is aligned with the slots in the body. Place the open end of the sampler into the 40-ml vial(s) containing the applicable preservative chemical and slowly extrude the soil plug by pushing the plunger down. (Please note that it may be appropriate to tilt the 40 ml vial as the plug is being delivered to reduce splashing of the preservative chemical). Wipe away any soil or debris from the threads of the vial(s) and quickly place the closure back onto the vial.

Special Notes:

- Each C & G Container's Terra Kit is enclosed in a 2 mil zip top bag.
- The C & G Container's Terra Kit is designed and prepared to hold each initial tared weight measurement as not to exceed a 0.199-gram loss/gain difference from the initial tared weight for six (6) months from the date the kit was prepared.
- The C & G Container Terra Core Kits should be stored in a cool atmosphere and out of direct sunlight.
